1. Project Overview

Millions of micro-entrepreneurs — cobblers, potters (kumhar), tailors, artisans, and small vendors — possess valuable skills but lack digital visibility and access to customers. Most rely on foot traffic or word-of-mouth, which limits income growth and sustainability.

HunarHub is a web-based digital marketplace that digitally empowers local micro-entrepreneurs by giving them a centralized platform to showcase their skills, sell handmade products, and accept service requests — while customers can easily discover and support local talent.

1.1 Problem Statement

- No digital presence or marketing reach
- Limited customer discovery beyond local areas
- No structured way to accept service requests or orders
- Dependency on middlemen or offline sales
- Lack of transparency in pricing and availability

1.2 Objectives

Primary:

- Digitally connect local micro-entrepreneurs with customers
- Enable service booking and product selling from one platform
- Promote traditional skills and handmade products
- Increase income opportunities for small vendors

Secondary:

- Encourage local and sustainable commerce
- Reduce dependency on middlemen
- Provide entrepreneurs with simple digital tools
- Enable community-based economic growth

1.3 Scope of Work

In Scope:

- Web-based responsive platform
- Entrepreneur profiles and service listings
- Product marketplace for handmade items
- Order and service request management

Out of Scope:

- Native mobile applications
- International shipping
- Advanced AI recommendations
- Logistics and delivery management

2. Functional Requirements

2.1 Customer (User) Features

- User registration & login
- Browse local entrepreneurs by category — Cobbler, Potter (Kumhar), Tailor, Artisan, Small Vendor
- Search and filter by skill type, location, and price range
- View entrepreneur profiles: skills & experience, product gallery, pricing details
- Place service requests
- Purchase handmade products
- View order and request history
- Leave ratings and feedback

2.2 Micro-Entrepreneur Features

- Dashboard to manage profile — registration & profile creation
- Skill and service listing
- Product listing with images and pricing
- Accept or reject service requests
- Manage availability
- View orders and service requests
- Earnings overview

2.3 Admin Features

- Approve and verify entrepreneurs
- Manage categories and skills
- Monitor orders and service requests
- Handle disputes and complaints
- Platform analytics and reports

2.4 High-Level User Flow

- User visits the platform
- Registers or logs in
- Browses local entrepreneurs
- Views profile or products
- Places a service request or order
- Entrepreneur confirms the request
- Service is delivered or product is sold
- User provides feedback

3. Non-Functional Requirements

Category	Requirement
Performance	Page load time under 3 seconds; supports concurrent bookings
Security	Secure authentication and data protection
Reliability	Accurate order and service-request tracking
Usability	Simple, intuitive, mobile-first UI

4. Technology Stack

Layer	Technology
Frontend	HTML5, CSS3, JavaScript · React.js / Next.js · Bootstrap / Tailwind CSS
Backend	Node.js with Express.js
APIs	REST APIs for service requests, status updates, and notifications
Database	MongoDB or PostgreSQL
Deployment	AWS / Vercel / Netlify

This maps directly onto the MERN stack (MongoDB, Express.js, React.js, Node.js), making it well suited to a single JavaScript/TypeScript codebase across client and server.

5. Data Requirements

5.1 Core Entities

- Users
- Micro-Entrepreneurs
- Skills / Categories
- Products
- Service Requests
- Orders
- Reviews

5.2 Sample Business Data (per entrepreneur)

- Name
- Skill Type
- Services Offered
- Product List
- Pricing

6. Key Performance Indicators (KPIs)

KPI	What It Measures
Registered entrepreneurs	Growth of the supply side of the marketplace
Active users	Ongoing customer engagement
Service request conversion rate	How often browsing turns into a booked request
Product sales volume	Marketplace transaction activity
Average entrepreneur earnings	Real income impact for entrepreneurs
Customer satisfaction ratings	Quality and trust in the platform

7. Assumptions & Constraints

7.1 Assumptions

- Entrepreneurs are willing to onboard digitally
- Customers support local businesses
- Internet access is available at a basic level

7.2 Constraints

- Digital literacy of entrepreneurs
- Limited initial geographic coverage
- Manual service fulfillment

8. Deliverables & Submission

- Functional web application
- Admin dashboard
- PRD & technical documentation
- Deployment-ready build

9. Expected Impact

- Increased income for local micro-entrepreneurs
- Preservation and promotion of traditional skills
- Stronger local economies
- Digital inclusion of small vendors

10. Future Enhancements

- Mobile applications
- Digital payments & wallets
- Logistics and delivery integration
- Skill training & certification modules
